Manager: Andreas Jarbøl - a.jarbol@hotmail.com

2013 - 2015

Fitbay - Social Shopping

Co-founded clothes fitting, turned size and sharing app.
Stopped: We went bankrupt.
fitbay.com

I am a full stack engineer, specialized in frontend web development. HTML, CSS, and JavaScript is my bread and butter. I build accessible and user-friendly applications with an emphasis on simplicity. As a team player with a strong work ethic, I strive for excellence for myself as well as for others.

My biggest strength is my ability to communicate and bridge gaps. A skill that I acquired prior to software development in the service sector and the Danish army. My biggest weakness, is my distractibility. This is why I thrive with remote work where I can control my environment and do deep focused work.

I am platform agnostic, with love for an open and accessible web. Building great software is no easy task. The team and processes are critical factors. I make it my duty to ensure that my team always improves and evolves.
